SKILLS

- Compose Multiplatform (CMP)
- Kotlin Coroutines & Flow
- Clean Architecture & MVVM
- Retrofit (REST API)
- Room Database
- Git Version Control
- Firebase & Supabase (BaaS)
- Koin (Dependency Injection)

CERTIFICATES

- **Android Programming Certificate:**
Successfully completed a specialized Android Programming course, including practical examples, functions, and group discussions. [Link](#)
- **CS50x Puzzle Day 2023 Certificate:**
Awarded for scoring among the highest in a collaborative problem solving and critical thinking competition. [Link](#)

EDUCATION

B.S.c. Computer Science
University Of Tabriz

SUMMARY

I am an Android Developer and Computer Science student specializing in building modern and responsive user interfaces using Kotlin and Jetpack Compose. I adhere to Clean Architecture principles to write readable, maintainable, and high-performance code. I am a challenge-driven and proactive individual with a strong motivation to learn and grow professionally. I am currently expanding my knowledge in application security requirements and testing techniques, and I am ready to contribute to a forward-thinking technical team to build a secure and stable product.

EXPERIENCE

Rahkar Gostaran - Flutter Developer

- Engineered secure, token-authenticated API pipelines with robust error handling, ensuring reliable real-time data synchronization across clients.
- Delivered high-performance e-commerce modules using BLoC/Cubit and Clean Architecture, managing complex UI states to ensure a seamless shopping experience.
- Implemented modular clean architecture and optimized widget rendering performance, reducing unnecessary UI re-renders and memory overhead.

Kotlin Developer - Freelancer

- **Gym Guys:** Developed and launched a modern fitness tracking app using Kotlin and Jetpack Compose with secure Firebase Authentication. Integrated a specialized AI chat module via API to handle sports-focused queries
[Github Link](#) / [Portfolio](#)
- **MoodFlix:** Developed the app using Kotlin, Jetpack Compose, & MVVM, applying Clean Architecture and Repository Pattern for a scalable codebase. Integrated TMDB API for real-time media retrieval and Firebase (Auth/Firestore) for secure user management. Engineered a persistent "Favorites" playlist system (SharedPreferences & Gson) and designed a modern UI with Glassmorphism and custom animations.

Kotlin Multiplatform Developer (KMP)

- **Tempo:** Developed a cross-platform study app (Android/iOS) using KMP, Compose Multiplatform, and Clean Architecture with a single shared codebase. Integrated Supabase (Auth, PostgreSQL, Storage) to power real-time group study rooms, live tracking, and activity feeds. Implemented offline resilience, automatic retries, cross-platform image pipelines (Coil, expect/actual), and dependency injection via Koin.

RESEARCH & ACADEMIC EXPERIENCE Co-Author | Research Paper

Climate-Aware Adaptive Federated Learning for Rainfall Forecasting

- **CA-AdapFL:** Co-developed an adaptive federated learning framework, designing core data processing and routing methodologies. Outperformed XGBoost and LightGBM benchmarks with a top R^2 score of 0.826.
